

natural living

AS CREATION

sensitive
living

The wallpapers in the "natural living" collection are completely PVC-free. The specially developed coating dispenses with plasticisers (phthalate-free) and solvents during production.

Compared to conventional PVC wallpapers, "natural living" wallpapers are particularly permeable to water vapour and thus support the moisture-regulating properties of your walls. This ensures a good indoor climate.

phthalate
free

The newly developed coating of the wallpaper relies on an innovative polymer. This polymer can be printed completely water-soluble. Unlike PVC wallpapers, we can therefore dispense with the use of organic solvents.

“natural living” impresses with colour-intensive patterns with robust, structured surfaces that are produced with low levels of harmful substances.

healthy living

“natural living” wallpapers offer an ideal combination of innovative raw materials, the usual high quality properties and the added bonus of healthy living.
